

Keyless access, precious protection.

eAccess – The intelligent access system
for homes and businesses.

since 1863

Glutz

Join the future of access today.

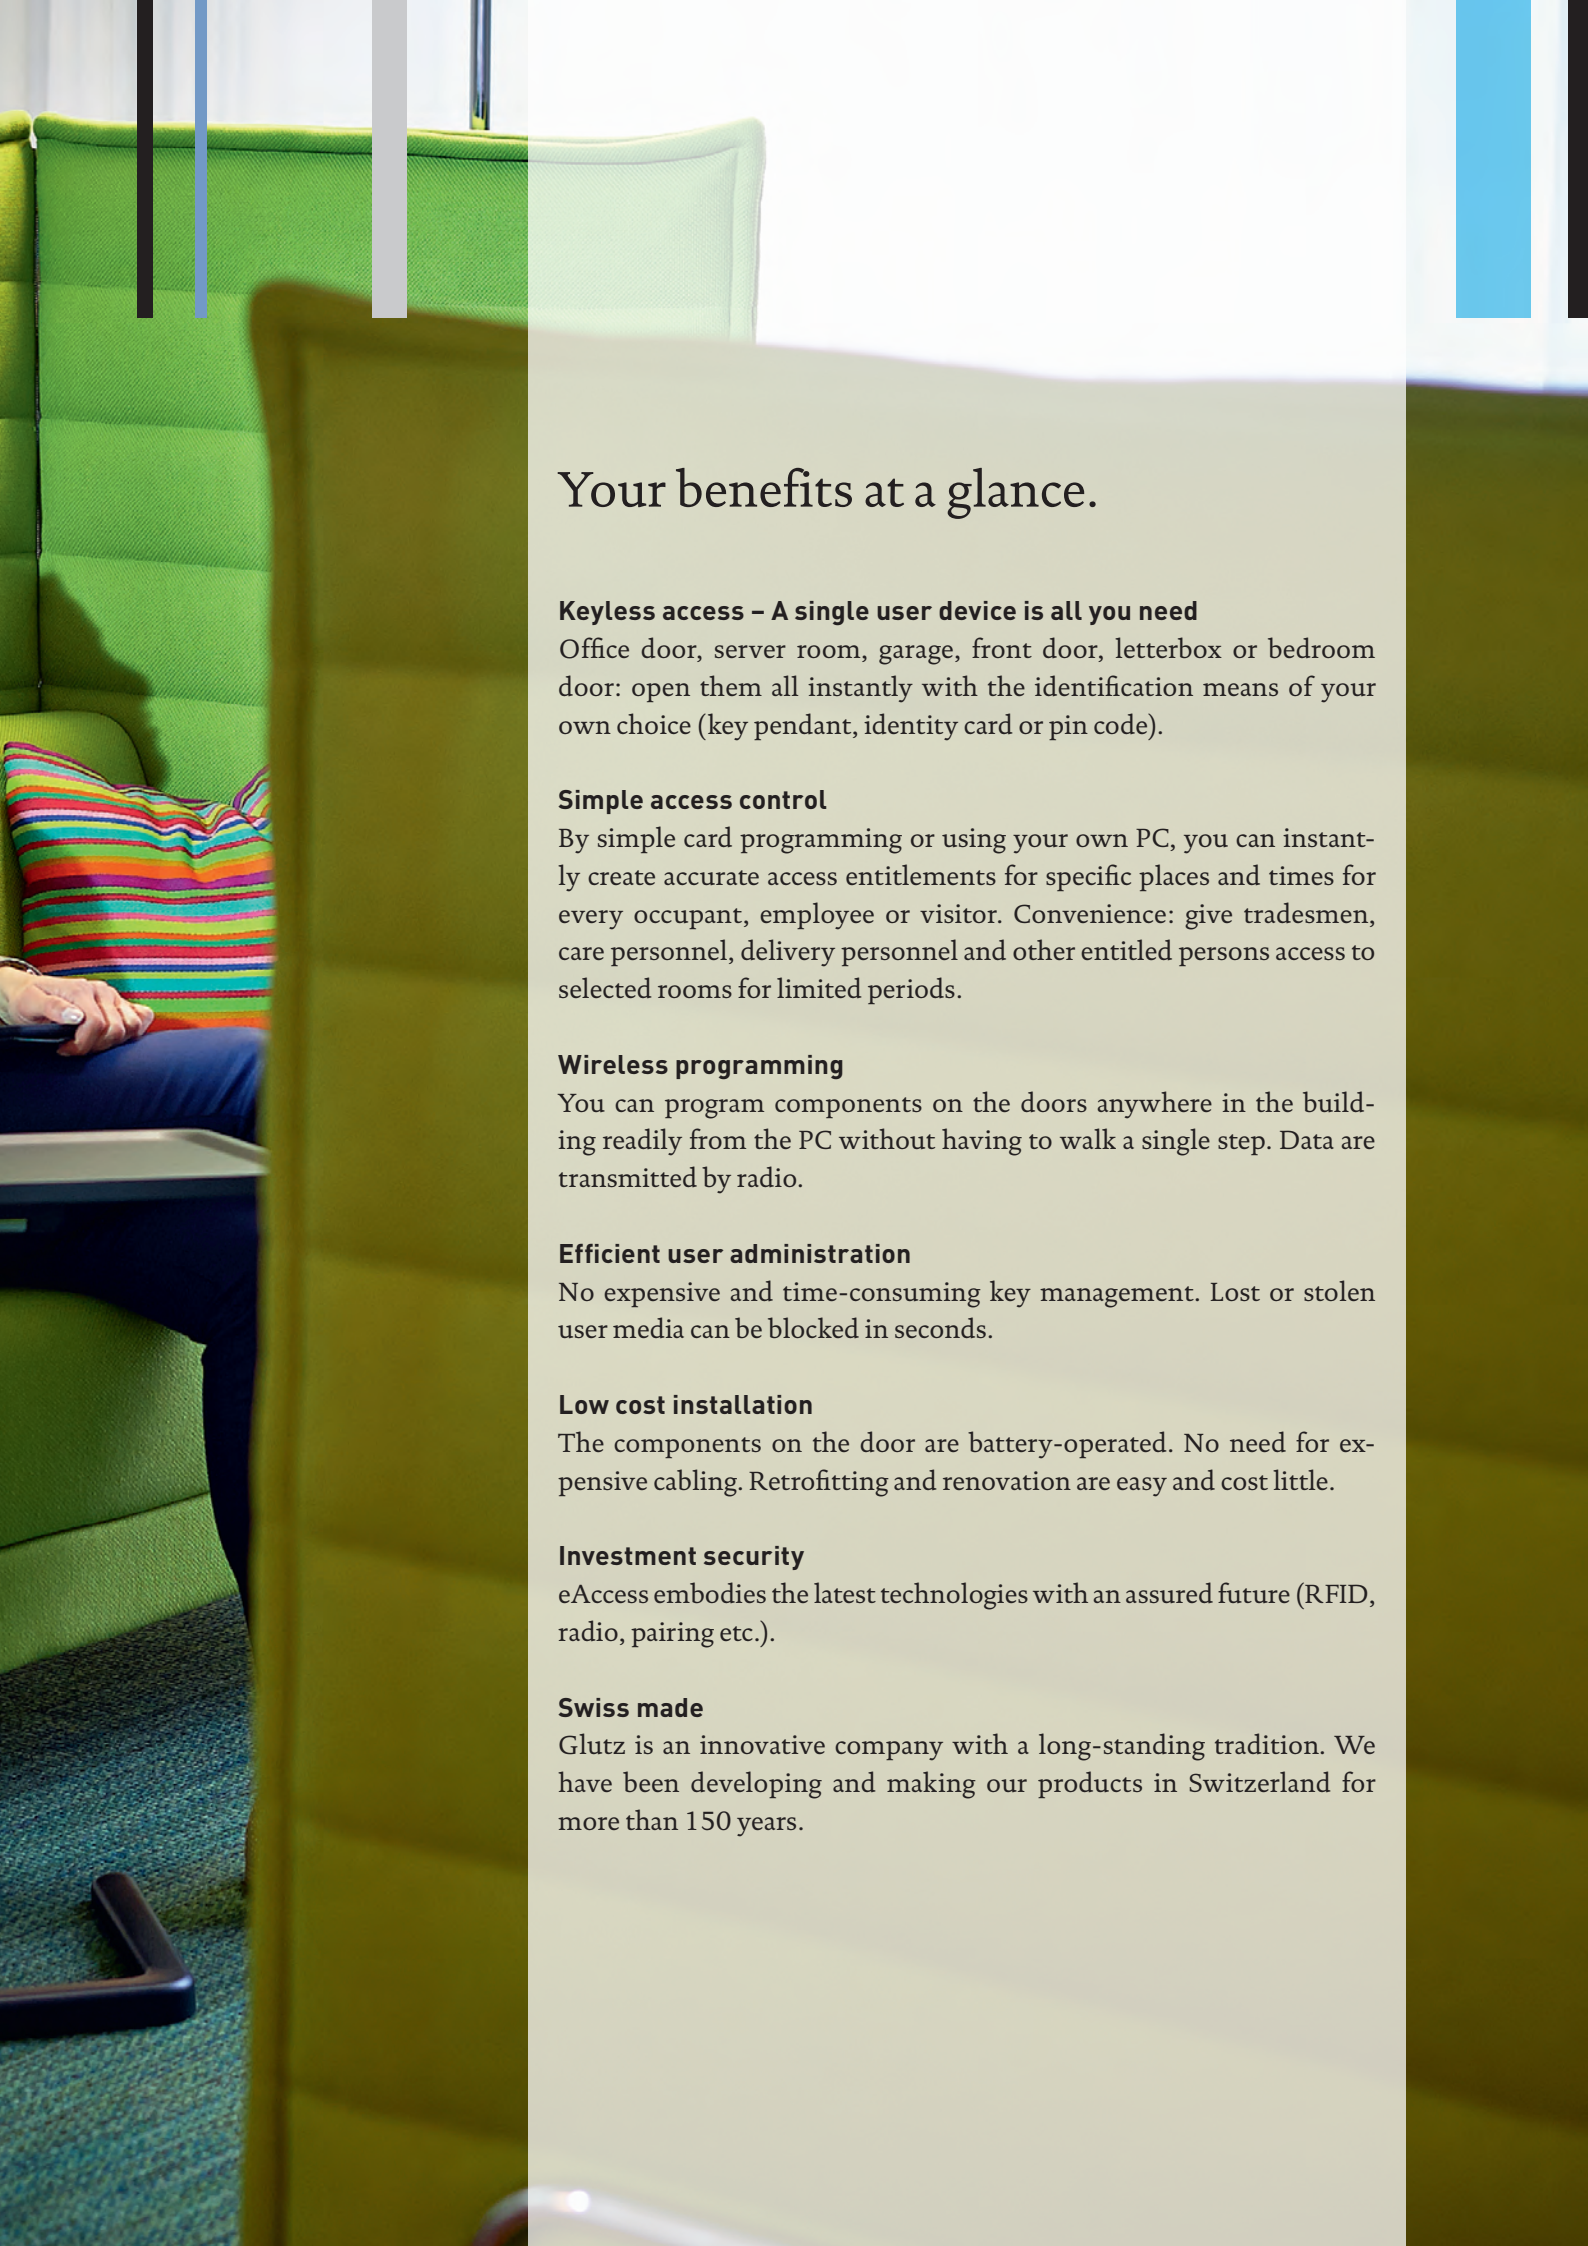

Comprehensive solutions from a single source without shopping around: Glutz supplies all the entry and exit solutions you could possibly need in your business or home. Choose the latest technology to make your living easy.

150 years of experience, unique know-how of mechanical units and outstanding expertise in mechatronic systems make Glutz the Swiss market leader in access systems. We take perfect care of your high security needs. We are your professional guide to the future of access.

How should your access system be designed? Perfectly secure, easy to manage, scalable at will and convenient to operate without keys? That is it. Accept nothing less. From the rock-solid security plate or RFID clip to programming software, everything in your system is made to the finest Swiss quality standard.

In your company or at home: not every room needs «heavyweight» protection against unauthorised access. When we design your own particular solution, we take account of different risk profiles. The result is an overall system which satisfies every security need perfectly. Making living more comfortable and work more efficient.

Customised secure access – round the clock – meeting all standards – highly convenient. We will be happy to explain how it is done.

Your benefits at a glance.

Keyless access – A single user device is all you need

Office door, server room, garage, front door, letterbox or bedroom door: open them all instantly with the identification means of your own choice (key pendant, identity card or pin code).

Simple access control

By simple card programming or using your own PC, you can instantly create accurate access entitlements for specific places and times for every occupant, employee or visitor. Convenience: give tradesmen, care personnel, delivery personnel and other entitled persons access to selected rooms for limited periods.

Wireless programming

You can program components on the doors anywhere in the building readily from the PC without having to walk a single step. Data are transmitted by radio.

Efficient user administration

No expensive and time-consuming key management. Lost or stolen user media can be blocked in seconds.

Low cost installation

The components on the door are battery-operated. No need for expensive cabling. Retrofitting and renovation are easy and cost little.

Investment security

eAccess embodies the latest technologies with an assured future (RFID, radio, pairing etc.).

Swiss made

Glutz is an innovative company with a long-standing tradition. We have been developing and making our products in Switzerland for more than 150 years.

Perfect interaction: the components.

The easier the access, the more complex the consultancy, determination of needs and project implementation. This paradox confronts planners and operators with tough challenges. A team of access specialists and our network of highly trained and certified eAccess partners in your vicinity are there to help you.

E-Reader with pin code

Allow tradesmen, suppliers and visitors easy access – with a temporary pin code, personal key pendant or identity card.

E-Fittings

Access authorisations are written directly onto the fittings by wireless access. You clear the doors by means of RFID access media detection for a limited area and time or by sending a remote wireless opening signal. For outer doors as a security feature and for inner doors as an organisational fitting – always in the same high quality design.

G-Line clip and G-Line card

For contactless opening of doors, cupboards and letterboxes. Small, compact and convenient. The two standard media are also suitable for additional third party services, such as time recording or coffee machine and photocopier billing.

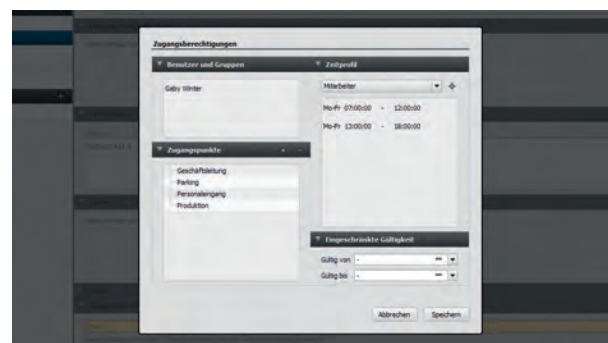

Net wireless stick and card programming

Just plug into your PC and the net wireless stick transmits programming data straight to the access components in the building without cables. Alternative programming with a card set.

Software

For user-friendly programming and identification of all devices and creating access authorisations.

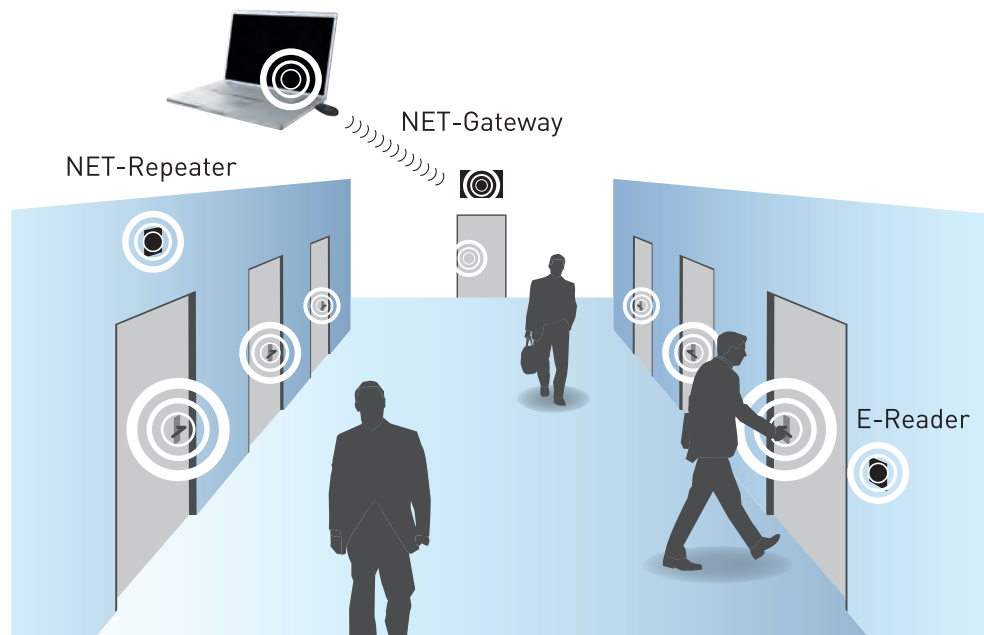

Lock solutions

eAccess devices which do not depend on locks are ideally suited to combined use with robust and proven insert and multi-point locks by Glutz.

Glutz Wireless Access (GWA)

With wireless networking of battery-operated access point devices such as e-fittings, readers and cylinders, Glutz opens up a new age: communication between the devices is incredibly easy and data traffic between the devices and the management software takes place practically in real time. Visionary!
